SUMMARY

Linux-native backend developer with production experience administering Linux servers on AWS and GCP, configuring Nginx, managing MySQL, and automating infrastructure with Terraform and Bash. Open source contributor with a strong interest in server operations and DevOps. Studying for AWS Certified Cloud Practitioner.

EDUCATION

Sahrdaya College of Engineering and Technology <i>B.Tech in Computer Science and Engineering</i>	Kodakara, Kerala <i>Aug. 2024 - May 2028</i>
--	---

EXPERIENCE

Backend Developer Intern <i>GTech MuLearn</i>	Mar. 2025 – 2026 <i>Remote, Kerala</i>
- Maintained consistent uptime for 60,000+ active learners by administering Linux-based AWS EC2 servers, responding to CloudWatch alerts, and configuring Nginx as a reverse proxy with SSL/TLS termination - Eliminated authentication failures across 5+ production API modules by building JWT-based auth workflows in Django, backed by MySQL on AWS RDS with schema migrations, indexing, and connection tuning - Reduced deployment friction by scripting Bash-based release pipelines and GitHub Actions CI/CD workflows, enabling zero-downtime updates across production environments	

PROJECTS

Terramine <i>Terraform, GCP, Docker, Caddy, Cloudflare DNS, Bash</i>	2026
- Cut Linux server provisioning time by 80% using Terraform IaC on GCP, with Docker Compose services behind a Caddy HTTPS reverse proxy and automated Cloudflare DNS updates via API - Hardened server reliability by scripting Bash backup pipelines to Cloudflare R2 with failure alerting, retention policies, and a full 16-finding infrastructure security audit	
AUR Maintainer — networkmanager-git <i>Arch Linux, PKGBUILD, Meson, Bash</i>	2026
- Took over and repaired a broken Arch User Repository package by fixing a faulty <code>pkgver()</code> function, adding a missing Meson compile step, and migrating the libsoup dependency to libsoup3 - Verified clean builds across targets using Arch’s devtools (<code>extra-x86_64-build</code>) after auditing and removing stale architecture references from the PKGBUILD	
Hyperledger Fabric – Contributor <i>GitHub Actions, Bash, Linux Foundation</i>	2026
Shipped a 6-bug fix (PR #5468, merged) to the Linux Foundation’s Hyperledger Fabric GitHub Actions pipeline, repairing corrupted regex patterns, an oversized buffer config, and mislabeled CI jobs — restoring automated link-checking and closing a 2-year-old open issue	
Sahrdaya College Official Website <i>Next.js, React, Tailwind CSS</i>	2025-26
Improved load performance for 3,000+ daily visitors by leading the production migration of sahrdaya.ac.in to Next.js with image optimization and incremental static regeneration	

ACHIEVEMENTS

Winner — VITALS Hackathon	2024
<i>IEEE National-Level Deepfake detection system using MTCNN + EfficientNet on FaceForensics++</i>	
Winner — ICTK Techathon	2024
<i>State-Level Kerala AI-powered course recommender for FYUGP elective selection</i>	
	<i>Kerala, India</i>

TECHNICAL SKILLS

Linux & Server Admin: Linux (Debian, Ubuntu), Nginx, Apache, SSH, Bash/Shell Scripting, Systemd, Cron, Log Analysis
Networking: DNS, TCP/IP, SSL/TLS, Reverse Proxy, Cloudflare, HTTP/HTTPS
Cloud & DevOps: AWS (EC2, S3, RDS, CloudWatch), GCP, Terraform, Docker, GitHub Actions
Databases: MySQL/MariaDB, PostgreSQL, MongoDB, Redis, SQLite
Languages: Python, Go, Bash, JavaScript, C
Certifications (In Progress): AWS Certified Cloud Practitioner
