

Mishal Shanavas

Kerala, India | +91 8848879060 | mishalshanavas@yahoo.com | linkedin/mishalshanavas | github/mishalshanavas | mishalshanavas.in

Summary

Linux-focused CS student seeking infrastructure and DevOps internships. Has merged upstream fixes in Hyperledger Besu and Fabric, maintains an Arch Linux package, and builds Terraform infrastructure with Prometheus/Grafana monitoring.

Education

Sahrdaya College of Engineering and Technology — Kodakara, Kerala
Bachelor of Technology in Computer Science and Engineering — *Aug. 2024 – May 2028*

Experience

Backend Developer Intern — Mar. 2025 – Feb. 2026
GTech MuLearn — *Remote, Kerala*

- Built Django REST APIs (JWT auth, onboarding, jobs) on MySQL/AWS RDS for MuLearn (60,000+ learners)
- Shipped Launchpad login, onboarding, and job flows to production with frontend and design teammates

Open Source

Hyperledger Fabric (Linux Foundation) | *GitHub Actions, CI/CD, Go* — Apr. 2026

- Repaired Fabric's docs link-checker workflow (PR #5468, merged), closing a 2-year-old issue: fixed regexes hiding broken links, capped an INT32_MAX buffer, and added a job timeout

AUR Package Maintainer: networkmanager-git | *Arch Linux, PKGBUILD, Meson, Bash* — Jun. 2026 – Present

- Adopted and repaired an orphaned AUR package: fixed a faulty `pkgver()`, added the missing Meson build step, and migrated libsoup to libsoup3, verified with clean-chroot builds using Arch `devtools`

Hyperledger Besu | *Java, JSON-RPC, JUnit* — Jul. 2026

- Fixed malformed RLP transactions returning an internal server error instead of `Invalid params` (PR #10736, merged, released in Besu 26.7.1); added parameterized regression tests for 8 invalid payloads

Infrastructure Projects

Terramine | *Terraform, GCP, Docker, Caddy, systemd, Cloudflare R2* — Jun. 2026

- Codified a GCP deployment in Terraform (Debian VM, static IP, dedicated VPC and firewall rules, Cloudflare A/SRV records) so the entire server rebuilds from scratch with one `terraform apply`
- Wrote an idempotent bootstrap (Docker, swap, Caddy TLS, health checks) and off-site disaster recovery: a systemd timer checks every 5 min and syncs snapshots to Cloudflare R2 with 3-snapshot retention, plus a rollback-safe restore
- Built Prometheus/Grafana monitoring with promtool-tested alerts for downtime, disk, memory, and stale backups

Self-Hosted Mail Server | *Mailcow, Docker, Azure, Postfix, DNS, SMTP* — Aug. 2026

- Deployed Mailcow (Postfix, Dovecot, Rspamd) in Docker on a 4 GB Azure VM with Let's Encrypt TLS; routed outbound mail via an SMTP relay on 587/STARTTLS after Azure blocked port 25
- Configured MX, SPF alignment, dual DKIM (2048-bit), DMARC, and reverse DNS (PTR) in Cloudflare; validated TLS, relay, and delivery before a staged MX cutover

Doomly Release Pipeline | *GitHub Actions, Gradle, Bash, GitHub Pages* — May 2026

- Built a release pipeline that derives semver from tags, restores a signing keystore from secrets, and publishes signed APK/AAB builds, with least-privilege permissions and concurrency locks; GitHub Pages deploys via OIDC

Technical Skills

Languages: Python, Go, Java, Bash, C
AWS: EC2, S3, RDS, Lambda, API Gateway, IAM, CloudFormation
Cloud & IaC: Terraform, GCP, Azure, Cloudflare
DevOps & Linux: Linux, systemd, Docker, GitHub Actions, Git, Nginx, Caddy, Prometheus, Grafana
Networking: DNS, TCP/IP, TLS, SMTP, SPF/DKIM/DMARC, Reverse Proxies, Firewalls
Backend & Databases: Django, REST APIs, MySQL, PostgreSQL, SQLite

Achievements

Winner, VITALS Hackathon (IEEE, national) | **Winner**, ICTK Techathon (Kerala, state level) — 2024
